An ORF has been identified within the sequence. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used to obtain full length gene therapy and chromosome mapping procedures. They are used to obtain
                                                                                                                                                                                                                                                                                                               Human; 5' EST; expressed sequence tag; secreted protein; cDNA isolation; gene therapy; chromosome mapping; ss.

The invention identifies regions of the human factor IX (iFRIX) gene, and a region of the human protein C (APF54018) are age-related capulatory sequences. The hFIX age-related regulatory sequences are designated AES' (AAF54018) and are found in the 5' (AFF54018) and are found in the 5' (AFF54018) and are found in the 5' UTR (at position 2164-2165 of AAF54018) and 3' UTR (at position 2164-2165 of AAF54018). These elements act synergistically to crease hFIX levels over the lifespan of an individual; however, they can independently exert effects on hFIX mRNA in an age-related manner, with AES' acting to stabilise hFIX mRNA, and AE3' acting to increase hFIX mRNA is and AE3' acting to increase hFIX mRNA is and contains two PEA-3 (polyoma virus activator 3) elements of AAF64081), and contains two PEA-3 (polyoma virus activator 3) elements of companies and contains two PEA-3 (polyoma virus activator 3) elements of 5'-GAGGAA-3' and 5'-CAGGAAG-3'. The age-related regulatory sequences of the invention, along with their homologues, variants and fragments, may be used in the construction of recombinant expression vectors for the expression of a desired sequence in an age-related fashion in a host cell. Preferred target genes for expression in such age-regulatable constructs and conductor of the pro-coaquants factor IX and factor VIII, and the anti-coagulants protein and reporter proteins such as luciferase. Preferred promoters factor IX promoter, the T7 promoter, the T3 promoter and the SPG promoter. The expression vectors include the human factor IX promoter, the T7 promoter coagulation (e.g., the pro-coaquants factor IX promoter, the T3 promoter and the SPG promoters of secondariants are seed in the treatment of sense, diabetes, Alzheimer's disease, the treatment of thrombosis, cardiovascular disease, diabetes, Alzheimer's disease, cancer, osteoporosis, osteoarthritis and dementia. Specifically, they may be used to expression or transgenic cells or animals age-related rise in factor IX ansequic cells and animature age-re

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          expression in an age-related manner and/or in a liver-specific manner. The invention identifies regions of the human factor IX (hFIX) gene, a region of the human factor IX (hFIX) gene, and regulatory sequences. The hFIX age-related regulatory sequences are designated AE5' (AAF4016) and AE3' (AAF54017) and are found in the 5' UTR (at position 2164-2165 of AAF54018) and 3' UTR (at position 2164-2165 of AAF54018) and 3' UTR (at position 2164-2165 of AAF54018) and are found in the 5' UTR (at position 1264-2165 of AAF54018) and 3' UTR (at position 2164-2165 of AAF54018) respectively. These elements act synergistically to increase hFIX levels over the lifespan of an individual; however, they with AE5' acting to stabilise hFIX mRNA, and AE3' acting to increase hFIX mRNA levels, over time. AE5' also directs liver-specific expression. The HC gene age-related regulatory sequence is found in the 5' UTR (AAF54081), and contains two PED-3 (polyoma virus activator 3) elements 5'-GAGGAAA-3' and 5'-CAGGAAG-3'. The age-related regulatory sequences of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Age-related gene regulation; liver-specific; gene expression; numan factor IX; hFIX; ARE<sup>5</sup>, Age regulatable expression construct; antisense therapy; gene therapy; thrombosis; cardiovascular disease; diabetes; Algheimer's disease; Parkinson's disease; cancer; osteoporosis;
that contain vectors of the invention are useful as models of these diseases, in screening for potential therapeutic agents and for studying normal processes such as ageing and gene expression. Fragments and homologues of age-related regulatory sequences, are useful as probes to detect, isolate or identify other such sequences in samples. The present sequence represents an AB3' region fragment.

the invention, along with their homologues, variants and fragments, may be used in the construction of recombinant expression vectors for the expression of a desired sequence in an age-related fashion in a host call. Preferred target genes for expression in such age-regulatable expression vectors include those encoding proteins involved in blood anti-coagulants protein C and antithrombin III) human factor VIII, and the alpha-l-antitrypsin, PEA-3 protein and reporter proteins such as culfierse. Preferred promoters for use in such age-regulatable expression vectors include the human factor IX promoter, the T7 promoter, the T3 promoter and the SP6 promoter. The expression vectors of the invention may be used in gene therapy to provide age-related and/or liver-specific expression of target genes. Age-regulatable constructs may be used in gene therapy to provide age-related and/or liver-specifically, they may be used to such age-related conditions such as thrombosis, cardiovascular disease, diabetes, Alzheimer's disease, parkinson's disease, cancer, osteoporosis, osteoarthritis and dementia. Specifically, they may be used to express factor IX antisense mRNA in the treatment of thrombotic conditions associated with the natural age-related rise in factor IX expression. Transgenic cells or animals that contain vectors of the invention are useful as models of these contains a general and gene expression. Fragments and centers and detect, isolate or identify other such sequences, are useful as probes to detect, isolate or identify expression. Fragments in samples. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    e.g.

                                                              A single-stranded DNA (or its complementary strand or the corresp. double-stranded DNA) which comprises one of the 7817 "CS" sequences given in AAT19001-T26837 and which is able to hybridise to part of human genomic DNA, cDNA or mRNA is claimed. The GS (Gene Signature) sequences were obtained from 3'-directed cDNA ibraries prepared from various human tissues; synthesis of CDNA was initiated from the 3'-end of mRNA by using poly(") as the sole primer. Since the 3'-en untranslated sequence is unique to a particular mRNA species, almost all the 3'-oriented cDNAs hybridise with specific mRNAs. Each library is constructed so as to reflect accurately the relative abundance of different mRNAs in the particular tissue from which it was derived. The appearance frequency of a given GS in a cDNA library can be determined (esp. using primers and probes derived from the GS sequences) as a means of diagnosing abnormal cell function or for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             expressed sequence tag; secreted protein; cDNA isolation;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence is one of a large number of 5' ESTs derived from mRNAs encoding secreted proteins. No ORF has yet been conclusively identified within the present sequence. The 5' ESTs were prepared from total human RNAs on 1901A+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention describes a library of human polynucleotides comprising the sequences given in AAZ12532 to AAZ17779. Also described is a method of detecting differentially expressed genes correlated with the cancerous state of a mammalian cell, comprising detecting at least one differentially expressed gene product in a test sample from a cell suspected of being cancerous, where the gene product is encoded by one of the 5248 polynucleotide sequences given in AAZ12532 to AAZ1779. The polynucleotides can be used as a source of primers and probes, which can be used for a variety of purpose, e.g. detection of expression levels,
derived from the 5' ends of mRNAs and even in those cases where longer CDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length CDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design
                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human; gene; gene expression product; diagnosis; therapy; probe; detection; mapping; tissue typing; profiling; forensic; cancer; genetic analysis; colorectal cancer; breast cancer; lung cancer; ss.

mapping, tissue typing or profiling, forensics, genetic analysis and detection of polymorphisms. Polypeptides encoded by the polymucleotides can be used for raising antibodies for experimental, diagnostic and therapeutic purposes. The polymucleotides may also be used to construct arrays for diagnostics (which may be used to determine function of an encoded protein); and to detect differences in expression levels between two cells (e.g. to identify abnormal or diseased tissue in a human, to identify a genetic predisposition or susceptibility to a disease such as cancer). The polymucleotides of the invention are especially used in the dilanguage and management of colorectal cancer, breast cancer, and lung cancer. The polymucleotides can also be used to screen for

a Library of polynucleotides for diagnosing a cancerous state of mammalian cell and detecting cancer, particularly of the colon prostate, comprises 3351 human polynucleotide sequences -

Claim 9; Page 727; 1046pp; English.

The present sequence is one of 3351 sequences in a library of human polynucleotides. The library is used to detect differentially expressed genes correlated with a cancerous state of a mammalian cell and can detect colon, prostate, breast and lung cancer. The library can be used to produce probes for detection of mRNA and to produce additional copies of the polynucleotides. The probes can be used for chromosome mapping of the polynucleotide and for detection of transcription levels. Ribozymes or antisense oligonucleotides can be generated. The polynucleotides and

The library is used to detect differentially expressed genes correlated with a cancerous state of a mammalian cell and can detect colon, prostate, breast and lung cancer. The library can be used to produce probes for detection of mRNA and to produce additional copies of the polynuclectides. The probes can be used for chromosome mapping of the polynuclectide and for detection of transcription levels. Ribozymes or antisense oligonuclectides can be generated. The polynuclectides and their gene products are used as genetic or biochemical markers (e.g. in blood or tissues) that will detect the earliest changes along the carcinogenesis pathway and/or monitor the efficacy of therapies and preventive interventions. The polynuclectides, polypeptides and antibodies against them can be used in pharmaceutical compositions to

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This sequence represents a nucleic acid molecule which encodes a secreted human protein. The gene number, and the clone it is derived from, are detailed in the descriptor line. The gene can be used to generate fusion proteins by linking to the gene to a human immunoglobulin FC portion (e.g. AAX79002) for increasing the stability of the fused protein as compared to the human protein only.

The invention relates to 53 novel genes and their fragments (nucleic acid sequences: AAX79011-X79064; amino acid sequences AAX1411-Y14464) which are useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. Also, pathological conditions can be diagnosed by determining the amount of the new

ö
polypeptides in a sample or by determining the presence of mutations in the new polynucleotides. Specific uses are described for each of the 53 polynucleotides, based on which tissues they are most highly expressed in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; mouse; chicken; rat; secreted expressed sequence tag; sEST; expressed sequence tag; EST; probe; chemotactic; proliferative; immunomodulatory; haematopoietic; chemokinetic; analgesic; haemostatic; thrombolytic; antidiammatory; cytostatic; antibacterial; antifungal; antiviral; antidiabetic; antiasthmatic; vulnerary; antiparkinsonian; antiulcer; osteopathic; neuroprotective; notroportective; anticonvulsant; antidepressant; gene therapy; vaccine; autoimmune disorder; multiple sclerosis; allergic condition;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AAA43426 to AAA45925 represent specifically claimed secreted expressed sequence tags (SESTs), isolated from human, mouse, chicken and rat tissue sources. The SESTs can have a range of activities depending on the tissues they were isolated from. The activities include: chemotactic; proliferative; immunomodulatory; haematopoietic; chemokinetic; analgesic; hemostatic; thrombolytic; antilnflammatory; cytostatic; antibacterial; antifungal; antiviral; antidiabetic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    expressed sequence tags (SESTs), useful for treating various disorders such as autoimmune, infectious, and central nervous system disorders

New isolated human polynucleotides

```
anticorvulsant, and antidepressant. The sESTS can be used for gene identification and isolation of full-length cDNAs and genomic DNA molecules which correspond to the sESTS. Proteins encoded by the sESTS met useful in assays for determining biological activity and raising antibodies. They may be useful for treatment of autoimmune disorders (multiple sclerosis, insulin dependent diabetes), allergic conditions (asthma), myeloid or lymphoid cell deficiencies, wounds, burns, ulcers, osteoporosis, osteoarthritis, central nervous system disorders (Alzheimer's, Parkinson's, Huntington's disease, stroke), coagulation disorders (haemophilia, thrombosis), inflammatory disorders (Crohn's disease, tumours, bacterial, fungal or viral infections, depression and psoriasis. AAA45916 to AAA45911 represent linker variants which are given in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Cancer; human; colon; breast; lung; transmembrane receptor; Arpase; integral membrane protein; aspartyl protease; GATA family; wnt family; transcription factor; G-protein alpha subunit; protein phosphatase; phorbolester binding protein; diacylglycerol binding protein; trypsin; protein kinase; tyrosine phosphatase; developmental signalling protein; protein; protein; genetic mapping; diagnostic; detection; treatment; cervical; melanoma; colorectal adenocarcinoma; wilm's tumour; retinoblastoma; sarcoma; myosarcoma; lung carcinoma; leukemia; lymphoma; dysplasia; hyperplasia; endometrium; adrenal;

by screening for differential expression in colon cancer, breast cancer and lung cancer cell lines. The polynucleotides of the invention are represented in AAX98175-X99118 and encode polypeptides of protein cancer cell lines. The polynucleotides of the invention are represented in AAX98175-X99118 and encode polypeptides of protein cancer families selected from 4 transmembrane segments integral membrane proteins, 7 transmembrane receptors, ATPases associated with various cellular activities (AAA), eukaryotic aspartyl proteases, GATA family of transcription factors, G-protein alpha subunit, phorbolesters or dacy1glycerol binding proteins, protein subunit, phorbolesters or dacy1glycerol binding proteins and ww/rsp5/www fomain containing proteins. The encoded polypeptides also have a functional domain selected from Ank repeat, basic region plus leucine zipper transcription factors, bromodomain. E-hand, SH3 domain, WD domain/G-beta repeats, zinc finger (CZH2 type), zinc finger (CCHC class), and zinc-binding metalloprotease domain. The polynucleotides encode polypeptides with similarity to known protein families and are predicted to have similar properties. The novel polynucleotides can be used to develop products for use as therapeutic appinglactions. In particular, the product can be used for the detection and management of cancers. They can be used for the detection and management of cancers. They can be used for the detection and management of cancers. They can be used for the detection and management of cancers. They can be used for the detection and management of cancers. They can be used for the detection and management of cancers. They can be used for the detection and management of cancers. They can be used for the detection and management of cancers. They can be used for the detection and management of cancers. They can be used for the detection and management of cancers. They can be used for the detection and management, and lymphomas such as highlicocytic lawkemia, and hymphomas and congenital alvenda and

Corrections and proteins have activities based on the tissues invention. Human secreted proteins have activities based on the tissues and cells the genes are expressed in. Example of activities include: Correction; immunosuppressive; nootropic; neuroprotective; antitiviral; antiallergic; hepatotropic; antidiabetic; antifungal; antiparasitic; antiallergic; hepatotropic; antidiabetic; antimoranty; antitioral; culherary; anticonvulsant; antidiabetic; antifungal; antiparasitic; and cardiant. The polypuclectides and polypeptides are useful for preventing, treating or ameliorating a medical condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. The polypeptides can also be used as a food additive or preservative to increase or decrease storage capablities. The polypucledide are useful for chromosome identification. They are also useful as probes for diagnosing a disorder related to the female reproductive system, particularly breast and/or ovary cancer. They are also useful in the gene therapy of breast cand ovarian cancer. Secreted protein nucleic acids, proteins, controductions and antagonists are useful in the diagnosis, creatment and prevention of: (a) cancer; (b) immune disorders; (c) cardiovascular disorders; (d) wound healing; (e) neurological diseases; and (f) infectious diseases such as viral, bacterial, fungal and parasitic infections. use in cancer diagnosis and investigation. HD-PTP proteins, nucleic acids and antibodies may be used in the treatment, investigation and diagnosis of cancers, particularly those of the lung. The present sequence represents exon 2 of the human HD-PTP gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a novel human tyrosine phosphatase, histidine domain-protein tyrosine phosphatase (HD-PTP, AAB29661) and to human HD-PTP nucleic acids (AAC81224, AAC81225, AAC81263). The HD-PTP gene is located on chromosome 3p21.3. This region is frequently found to be deleted in lung cancers, and is therefore thought to contain a tumour suppressor gene. The invention also relates to expression vectors and host cells containing human HD-PTP nucleic acids; the recombinant production of HD-PTP, anticancer drugs containing HD-PTP; gene therapy compositions containing DNA encoding HD-PTP; diagnostic reagents containing HD-PTP outleic acids and an immunoassay method using HD-PTP-specific for HD-PTP; and an immunoassay method using HD-PTP-specific antibodies for HD-PTP; and an immunoassay method using HD-PTP-specific antibodies for HD-PTP; and an immunoassay method using HD-PTP-specific antibodies for HD-PTP; and an immunoassay method using HD-PTP-specific antibodies for HD-PTP; and an immunoassay method using HD-PTP-specific antibodies for HD-PTP; and an immunoassay method using HD-PTP-precipic antibodies for HD-PTP; and an immunoassay method using HD-PTP-precipic antibodies for HD-PTP; and an immunoassay method using HD-PTP-precipic antibodies for HD-PTP; and an immunoassay method using HD-PTP-precipic antibodies for HD-PTP.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             reproductive disorder; smooth muscle disorder; neurological disorder; arteriosclerosis; leukaemia; acquired immunodeficiency syndrome; AIDS; allergy; ovulatory defect; angina; hypertension; stroke; epilepsy; Alzheimer's disease; Tourette's disorder; ss.

                                                                                                                                                                                                                                                       Agonists and antagonists of the protein are protein prosent sequence another and antagonists of the protein are used to treat a disease or condition associated with overexpression of the protein. Diseases and conditions which can be treated include cell proliferative.

Immunological, reproductive, smooth muscle and neurological disorders e.g. arteriosclerosis, myeloma, leukaemia, acquired immunodeficiency syndrome (AIDS), allergies, ovulatory defects, angina, hypertension, stroke, Alzheimer's disease, epilepsy and Tourette's disorder. The polynucleotides may be used to detect and quantify gene expression in biopsied tissues where protein expression may be correlated with disease e.g. to determine absence, presence or excess expression of HTMP or to monitor regulation of HTMP expression during therapeutic intervention.
                                                                                                             Baughn MR;

```
This invention relates to nucleic acid sequences AAF93744 - AAF93916
which encode human secretory or membrane proteins represented by
AAB88131 - AAB8819. Included in the invention are primers
CAAF893917 - AAF94295 and AAF62232 - AAF62235 which are used to isolate the
CDNA sequences of the invention. The invention also includes methods for
the production of antibodies directed against the proteins, and cDNA
sequences, which can be used in vaccines. The polynucleotide sequences
can be used in gene therapy. The polynucleotide sequences and the
sequences which can be used in the prevention, treatment and
diagnosis of diseases associated with inappropriate secretory
protein/membrane protein expression. The nucleic acids and complementary
companies also be used as DNA probes in diagnostic assays
companies and their neactions (PCR) to detect and quantitate the
presence of similar nucleic acid sequences in samples. They may also be
used to study the expression and function of secretory proteins/membrane
polypeptides and their role in metabolism. The polypeptides may be used
as antigens in the production of antibodies against them and in assays to
dentify modulators (agonists and antagonists) of expression and
activity. The antibodies and antagonists may also be used as therapeutic
agents to down regulate expression and activity. The antibodies may also
be used as diagnostic agents for detecting the presence of the
polypeptides; in samples (e.g. by enzyme linked immunosorbant assay
contribits, and diabetes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ;

This sequence represents DNA originating from human leukaemia associated gene 1 (Leu1). The invention relates to B-cell chronic lymphocytic leukaemia (B-CLL) associated nucleic acids, including the present sequence, and amino acids. In humans, the Leul and Leu2 genes (see AAX58797 and AAX58801) have been identified as adjacent in B-CLL patients. Leul and Leu2 are strong candidate tumour suppressor genes involved in B-CLL leukaemogenesis. B-CLL associated nucleic acids can be used in gene thrarpy and for the production of proteins, which are used for the development of drugs against leukaemia and other malignancies of the same genetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 2127 BP; 665 A; 332 C; 466 G; 664 T; 0 other;

                                                                                                                                                                                                                                                                                                                                                                                                                        AAC88070 to AAC88124 encode the 55 FLEXHT (full-length molecules expressed in human tissues) proteins given in AAB36579 to AAB36633. The present invention describes an isolated polypeptide (A) comprising an amino acid sequence selected from one of 55 amino acid sequences 42-876 residues in length, corresponding to FLEXHT-1 to FLEXHT-55, a 90 % identical sequence, and a biologically active or immunogenic fragment of the sequence. The FLEXHT proteins can have antianeamic, anticonvulsant, antiarteriosclerotic, immunomodulatory, cytostatic, antiasthmatic, antilnflammatory, hepatotropic, antidiabetic, antisout, antillocr
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       and antirheumatic activities, and can be used in gene therapy. The polynuclectide sequences can be used to express the protein sequences. Pharmaceutical compositions comprising FLEXHT can be used to treat diseases or conditions associated with altered expression of functional FLEXHT. The proteins and polynucleotides can be used to diagnose and treat disorders including anaemia, epilepsy, arteriosclerosis,

secreted human protein. The gene number, and the clone it is derived from, are detailed in the descriptor line. The gene can be used to generate fusion proteins by linking to the gene to a human immunoglobulin protein as compared to the numen protein only.

The invention (e.g. AA224802) for increasing the stability of the fused protein as compared to the human protein only.

The invention relates to 95 novel genes and their fragments (nucleic acid sequences: AA224811-224907; amino acid sequences AAX41308-Y41404) which are useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. Also, pathological conditions can be diagnosed by determining the amount of the new polypoptides in sample or by determining the presence of mutations in the new polypucleotides. Specific uses are described for each of the 95 polynocleotides, based on which tissues they are most highly expressed in
                                                                                                                                                                                                                                                                                                                                               New isolated human genes, useful for diagnosis and treatment of e.g. cancers, neurological disorders, immune diseases, inflammation or blood

```
The present invention describes low adenosine (A) content antisense oligonucleotides and compositions (I) comprising them. In the antisense oligonucleotides the A is replaced by a 'Universal' or alternative base. (I) can have respiratory, bronchodilator, antiinflammatory, analysesic, immunosuppressive, antiasthmatic, hypotensive and cytostatic activities. The antisense oligonucleotides and (I) can be used to down regulate the expression and or activity of target polypeptides associated with lung/respiratory disorders and malignancies, such as stimulating and activating peptide factors and malignancies, such as stimulating and activating peptide factors and malignancies, such as stimulating and activating produced specific and non-specific enzymes, chemokines, andogenously produced specific and non-specific enzymes, chemokines redeptors, adenosine receptors, bradykinin receptors, central nervous system (DNS) and peripheral nervous and non-nervous system proteins, adenosine receptors, vasoactive peptides and receptors, binding proteins and malignancy associated proteins. The antisense oligonucleotides may be used in this way to treat disorders including respiratory obstruction (especially pulmonary obstruction and/or surfactant hypoproduction which are associated with a disease or condition selected from pulmonary vasoconstriction, inflammation, allergies, asthma, impeded respiration, respiratory distress syndrome (RDS), pain, cystic fibrosis (CP), allergie rhinitis (AN), pulmonary hypertension, emphysema, chronic obstructive pulmonary disease (COPD), pulmonary transplantation rejection, pulmonary infections, bronchitis, and artisone olivonucleotides may be used in that expensent human polynucleotide frammants and expensed in the expersent humans of the expensed in the experient condition and expense of informal expensed in the expense or expensed in the expense of information rejection, bulmonary insertions and artisones of information is expensed in the expense or expense or information is and expense or inform
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           fragments and antisense oligonucleotides used in the exemplification of

The present invention describes a new composition comprising an antisense oligonuclectide (ON) with low adenosine (up to 15%), which targets nucleic acids involved in bronchoconstriction, allergies, and/or inflammation. The ON can have antinflammatory, antiallergies, and/or inflammation. The ON can have antinflammatory, antiallergies, and/or inflammation. The ON can have antinflammatory, antiallergies, and/or caseful for the treatment of diseases associated with inflammation, impediated airways, including lung disease and diseases whose secondary effects afflict the lungs of a subject. They can be used for treating e.g. ischaemic conditions, pulmonary vasoconstriction, allergies, pain, cystic isthmosis, pulmonary hypertension, respiratory distress syndrome, pain, cystic fibrosis, pulmonary hypertension, emphysema, chronic obstructive pulmonary disease (COPP), and cancers such as leukaemias, lymphomas, carcinomas, and cancers which may metastasise to the lungs, including chreat and prostate cancer. The reduction of the adenosine content of the ONS reduction of the odenosine secretors causing release of deoxyadenosine which activates adenosine receptors causing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      bronchoconstriction and inflammation. AAA32313 to AAA33312 represent the nucleotide sequences given in the sequence listing from the present invention, which correspond to SEQ ID NO:1 to 2815, and then the last 185 sequences are also called SEQ ID NO:1 to 185, but the sequences differ from the previously named sequences. SEQ ID NO:11 to 1680 (AAA32323 to AAA3392) are specifically claimed ONs from the present invention. N.B. Sequences given in the disclosure of the present invention do not match up with their corresponding SEQ ID NO: sequences
                                                                                                                                                                                       phosphorothioate; impaired respiration; infilammation; allergy; allergy; disease; bronchoconstriction; inhibitor; antinfilammatory; antiallergic; antiasthmatic; cytostatic; analgesic; impaired airway; lung disease; ischaemic condition; pulmonary vasoconstriction; asthma: respiratory distress syndrome; pain; cystic fibrosis; emphysema; pulmonary hypertension; chronic obstructive pulmonary disease; COPD; cancer; leukaemia; lymphoma; carcinoma; metastasis; ss.
                                                                                                                                                                  adenosine receptor; low adenosine antisense oliqonucleotide;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New antisense oligonucleotides useful for treating e.g. pulmonary vasoconstriction, inflammation, allergies, asthma, hypertension, bronchitis, emphysema, respiratory distress syndrome, ischemia or

The present invention provides a novel method of estimating the susceptibility of an individual to a developmental disorder using genetic and environmental variables. The method can be used in the diagnosis, prevention and treatment of disorders such as schizophrenia, spina bifida cystica, Tourette's syndrome, bipolar illness, autism, conduct disorders, attention deficit disorder, obsessive compulsive disorder, chronic

```
contig, and exemplifies the invention. The specification describes nucleic acid sequence treation from a eukaryotic chromosome, including a nucleic acid sequences derived from a eukaryotic chromosome, including a necentromere or its functional derivative or hybrid, that are able, in a compatible cell, of replicating, acting as extra-chromosomal element and segregating during cell division. The sequences can be used to construct artificial chromosomes for use in gene therapy comprising a replicable, segregating nucleic acid that confers a specific phenotype on cells. Human artificial chromosomes can propagate in human cells and carry large amounts of DNA (e.g. therapeutic genes), and, being are also useful for generation of transgenic plants and animals, in production of proteins and to make diagnostic reagents, e.g. for expression of cytokines, receptors and growth factors, or to increase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence represents a bacterial artificial chromosome (BAC)

(TEXA) UNIV TEXAS SYSTEM.

A composition has been developed which comprises at least 1 coagulationCaficient tissue factor (TF) compound that is modified to increase its
Caficient tissue factor (TF) compound that is modified to increase its
Calological half-life, but excluding modification that involves attachment
to an antibody (or its antigen-binding region) that binds to a component
cells, vasculature or stroma) of tumours. Also described in the present
invention are compositions containing any coagulation-deficient TF for
promoting coagulation. The coagulation-deficient TFs are used to promote
coagulation preferentially in prothrombotic vessels, particularly those
associated with: (i) benign growths (e.g. benign prostatic hypertrophy);
Calo induce tumour necrosis), or (iii) other disorders that involve
angiogenesis, e.g. diabetic retinopathy, restenosis, neovascular
cangiogenesis, e.g. diabetic retinopathy, restenosis, neovascular
candinistered sytemically, particularly intravenously, typically at
administered sytemically in tumour-associated blood vessels after systemic

TBC-1 gene is mapped to a candidate region of prostate cancer on chromosome 4. Single nuclectide polymorphism (SNP) is located within the biallelic marker region 99-430-352, localised in intron 1 of TBC-1 genomic DNA. TBC-1 gene is involved in the regulation of cell cycle and tissue differentiation in mammals. An alteration of TBC-1 sequence may be associated with a pathological condition, resulting in abnormal cell proliferation leading to cancer, e.g. prostate cancer. The biallelic markers can be used for generation of genetic maps, linkage analysis and association studies. TBC-1 sequence can be used for detection, diagnosis, genotyping, production of transgenic animals and screening
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New isolated human TBC-1 nucleic acids, useful for developing products

The nucleic acids, and primers and probes, are used to identify polymorphisms, which may predispose an individual to disease, especially a vascular disease. They can also be used in phenotype correlations, forensics, paternity testing, medicine or genetic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention describes a homozygosity deletion domain co-existing in the 36-position of the first chromosome short arm (1p36) in human neuroblastoma. Also described are base sequences from the 1p36 position of human neuroblastoma cell lines (NB-1 and MASS-NB-SCH-1), which are tumour suppressor genes in human neuroblastoma. The genes are tumour suppressor genes in human neuroblastoma. The genes are tumour suppressor genes, base sequence data of which are applicable as tumour action, and gene diagnosis of tumours as well as in developing anti-cancer drugs. ARF97787 to ARF97829 represent PCR primers used in the exemplification of the present invention, and AAF97830 to AAF97824.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human 1p36 homozygosity deletion domain from the 36-position of first chromosome short arm in human neuroblastoma cell lines, applicable e.g. in gene diagnosis of tumors as well as in developing anti-cancer drugs

                                                                                                                                                                                                                                                                           Sequence 16, Application US/09128155

Patent No. 6117654

GENERAL INFORMATION:
APPLICANT: Pan, Yang
TITLE OF INVENTION: NOVEL MOLECULES OF TANGO-77 RELATED PROFEIN FAMILY
TITLE OF INVENTION: AND USES THEREOF
FILE REFERENCE: 09404/052001
CURRENT APPLICATION NUMBER: US/09/128,155
CURRENT FILING DATE: 1998-08-03
EARLIER APPLICATION NUMBER: US 60/091,650
EARLIER PILING DATE: 1998-07-02
EARLIER PILING DATE: 1997-08-04
NUMBER OF SEQ ID NOS: 18
SOFTWARE: FastSEQ for Windows Version 3.0
SEQ ID NO 16
LENGTH: 152331
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Oy 11740 tttttttgagacagagtctcactctgtcgcccaggctggagtgcagtggcacgatctcgg 11799

Patent No. 5622851
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Maley, Frank
APPLICANT: Meiner, Karen X.B.
TITLE OF INVENTION: Human Deoxycytidylate Deaminase Gene
                                                                                                                                      MEDIUM TYPE: RICHPY LLS.
COMPUTER: BLM PC compatible
COMPUTER: DEAD PC COMPAGE
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: PATENTIN Release #1.0, Version #1.25
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/370,975B
FILING DATE: 10-JAN-1995
CLASSIFICATION: 435

Sequence 11, Application US/09009217
Patent No. 6132729
GENERAL INFORMATION:
APPLICANT: Thorpe, Philip E.
APPLICANT: Gao, Boning
TITLE OF INVENTION: COMBINED TISSUE FACTOR AND
TITLE OF INVENTION: CHEMOTHERAPEUTIC METHODS AND COMPOSITIONS FOR COAGULATION
TITLE OF INVENTION: AND TUMOR TREATMENT
NUMBER OF SEQUENCES: 27
                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                 PREVENTING, AND TREATING
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ;
